Unfortunately the polys were not always fun. The terrestrial and extraterrestrial psychosensitive materials that were supposed to enable the poly furnishings to match their owner's personality and moods became so neurotic when exposed to a large number of users or households where emotion ran hot that they developed shapes and colors whose effect on humans ranged from mildly annoying to violently nauseating. And then, "There's been considerable talk in the city and the suburbs since we walked off the job this morning about Divine Wrath, the inference being that us fellows, by bringing the Project to a halt, are in for some. Well, don't you believe it, fellow members of Local 209? don't you believe it for one minute! Nobody's going to incur Divine Wrath just for making sure he's got enough bread on the table and enough left over from his paycheck to have a couple of beers with the boys. But you may, by now, be asking yourself, "What's a clone?" It's been in the news a great deal lately, but recognizing a word and knowing what it represents can be two different things. So let's go into the matter-The word "clone" is Greek, exactly as it stands, provided you spell it in Greek letters, and it means "twig." "Now before you play," I said, "you must understand that we did not wish it known we were working on a proposed naval system. Thus, we have pretended that we are fighting a space war of the future against the mythical race of Zorphs. The weapons you will be using will not have the standard Navy nomenclature, but you'll have no trouble recognizing what they really are." "No. I told you it was a stray-puppy relationship. By the end of July he had refined and miniaturized the device and had extended its sensitivity range into the infrared. He spent most of August, when he should have been on vacation, trying various methods of detecting sound through the device. By focusing on the interior of a speaker's larynx and using infrared, he was able to convert the visible vibrations of the vocal cords into sound of fair quality, but that did not satisfy him. He worked for a while on vibrations picked up from panes of glass in windows and on

framed pictures, and he experimented briefly with the diaphragms in speaker systems, intercoms and telephones. He kept on into October without stopping and finally achieved a system that would give tinny but recognizable sound from any vibrating surface—a wall, a floor, even the speaker's own cheek or forehead..with what seemed to him outlandish surroundings. "Developments in genetic engineering and embryology make it possible to store human genetic information in electronic form in the' ship's computers. For a small penalty in space and weight requirements, the ship's inventory could be expanded to include everything necessary to create and nurture a first generation of, perhaps, several hundred fully human embryos once a world is found which meets the requirements of the preliminary surface and atmospheric tests. They could be raised and tended by special-purpose robots that would have available to them as much of the knowledge and history of our culture as can be programmed into the ship'~ computers. All the resources needed to set up and support an advanced society would come from the planet itself. Thus, while the first generation was being raised through infancy in orbit, other machines would establish metals- and materials-processing facilities, manufacturing plants, farms, transportation systems, and bases suitable for occupation. Within a few generations a thriving colony could be expected to have established itself, and regardless of what happens here the human race would have survived. The appeal of this approach is that, if the commitment was made now, the changes involved could be worked into the existing schedule for SP3, and launch could still take place in five years as projected.'248.8-C..bag. It was impossible for Barry, sitting so nearby and having no one to talk to himself, to avoid eavesdropping on their conversation, which concerned (no doubt as a rebuke to his ignorance) Ireina Khokolovna's latest superb release from Deutsche Grammophon. She was at her best in Schumann, her Wolf was comme ci, comme fa. Even so, Khokolovna's Wolf was miles ahead of Adriana Motta's, or even Gwyneth Batterham's, who, for all her real intelligence, was developing a distinct wobble in her upper register. I got the impression he hadn't really lived Me so much as he'd read it, that all the things he knew about had never physically affected him. He was like an insulated island. Life flowed around him but never touched him, I wondered if the hump on his back made that much difference, if it made him such a green monkey he'd had to retreat into his insular existence. Practically everyone I had talked to liked him, mixed with varying portions of pity, to be sure, but liking nevertheless. Harry Spinner liked him, but had discovered something "peculiar" about him. Smith advances the time control. A flicker of darkness, light again, and the ship is gone. He turns back again until he finds it standing out under light canvas past Sandy Hook. Manipulating time and space controls at once, he follows it eastward through a nickering of storm and sun? loses it, finds it again, counting days as he goes. The farther eastward, the more he has to tilt the device downward, while the image of the ship tilts correspondingly away from him. Because of the angle, he can no longer keep the ship in view from a distance but must track it closely. November 21 and 22, violent storms: the ship is dashed upward by waves, falls again, visible only intermittently; it takes him five hours to pass through two days of real time. The 23rd is calmer, but on the 24th another storm blows up. Smith rubs his eyes, loses the ship, finds it again after a ten-minute search..
